SoDa Row Retail Center at Daybreak

SoDa Row is the first “village center” located in the heart of the Daybreak development in South Jordan, Utah. With the opening of SoDa Row, Daybreak residents can now enjoy a short stroll from their doorsteps to retail shops that include restaurants, a bank, a barbershop, a gymnastics center, and many other current and future retail locations. SoDa Row represents a key element of creating the spirit of community and neighborhood that Daybreak has successfully achieved.

The SoDa Row project was a design-build project. Hunt Electric was proud to be part of the design-build team with Sahara Construction and CCI Mechanical. In addition to quality electrical construction, Hunt Electric provided full electrical engineering services and energy analysis.

SoDa Row is not only unique in its architectural aesthetics and location, but it coincides with the owner's, Kennecott Land Corporation's commitment to sustainable and energy efficient development and construction. Energy efficient lighting, mechanical systems, and construction assemblies are just a part of contributing to Kennecott Land's effort to obtain its anticipated LEED® Gold Certification for the project. Hunt Electric's on staff, LEED® Accredited Professionals (AP's) assisted in this effort. In addition, tenant spaces are individually metered by a state-of-the-art microprocessor based system that tracks and records tenant power and natural gas usage in an effort to assist the owner and their valued tenants to reduce energy consumption. This means a win-win situation for both Kennecott Land and their tenants, especially in the current economic climate.

Congratulations to Kennecott Land Corporation and Hunt Electric's partners on another successful on-time and in-budget design-build project that not only benefits the community but also promotes sustainable development in Utah.
